

A way of seeing and a way of knowing

Every picture throws a spark.
Every spark can start a fire.

"If everyone knew the real impact of
what they were doing, they would make
different choices."

— Lee Williams

The hidden costs of the physical world

The Packaging: Styrofoam

- ☛ 3.4 kg CO₂e
- ⌚ 500+ years to break down

The Food: Farmed Atlantic Salmon

- ☛ 6.0 kg CO₂e
- ⌚ 3,000 miles traveled

Point your phone at the world. We will tell you what you are looking at—honestly, clearly, and without pretending to know more than we do. Environmental ignorance should be as obsolete as not knowing a product's price.

The Platform: Not an app, but a trust layer

The mobile app is just the first strong expression of the platform, not the boundary of it.

The Igniter Flywheel: Community as product truth

Confidence is infrastructure

0% greenwashing tolerance.

The Principle

Trust matters more than false precision.

The Practice

Every result carries a label. Trust is earned label by label, not assumed at scale.

The Promise

GREEN LIFE never overstates precision. When only an estimate exists, we say estimate. Every claim has a visible evidence trail.

The Confidence Taxonomy

Confidence Level	System Criteria	User Disclosure
Verified / Exact Match	Product linked to specific known record (e.g., Agribalyse/USDA).	We identified this specific item in our database.
Probable	Fuzzy match (pg_trgm) or crowdsourced data (Open Food Facts).	Impact estimated from similar verified ingredients.
Estimate	Vision-only identification mapped to category fallback (Climatiq).	Category average. Actual impact varies by sourcing.
Igniter Validated	Data submitted and voted on by community.	Sourcing verified by N Igniters.

0% Greenwashing Tolerance in the UI

The Figure

Displayed as “4.8 kg CO₂e” per serving and per kg for standardized comparison.

Food Result Card

4.8 kg CO₂e
per serving and per kg

Estimated ⓘ

Data from: [USDA & Agribalyse](#)

How was this computed? ▾

The Badge

The “Estimated” confidence label is prominent and impossible to miss.

Source Attribution

Clickable link stating “Data from: USDA & Agribalyse” leading to source details.

Methodology

Expandable “How was this computed?” section revealing the exact LCA scope (production, transport, packaging).

The Engine Room: From photo to trusted footprint

The Data API Matrix

Source	Primary Role	Coverage	Confidence Yield	Phase Allocation
Agribalyse (ADEME)	Core food LCA	2,500+ items (Gold Standard)	Exact Match (High)	Phase 1 (Seed Import)
USDA FoodData	Nutritional enrichment	400,000+ items	High (compostion only)	Phase 1 (Live API)
Open Food Facts	Packaged goods/barcodes	3M+ products (Crowdsourced)	Probable (Medium)	Phase 2
Climatiq	The Carbon Fallback	30,000+ emission factors	Estimate (Low)	Phase 1 (Fallback)
EPD / EPA TRI	Materials & Hazards	Third-party verified	Verified (Highest)	Phase 2/3

Phase 1 MVP: The Restaurant Moat

Mode 1: Food ID

- **Focus:** Meals and ingredients.
- **Why:** High-frequency decision point (3x daily). Hidden supply chains.
- **Data path:** Vision ID → USDA → Agribalyse.

Take a photo

Capture on image, including meals and items on your table, and see the profile.

Take Photo

Quick scan

QR or barcode is the best way to get food profiles, and match with source backed details.

Scan Barcode

Mode 2: Materials Scan

- **Focus:** Styrofoam, bioplastics, utensils.
- **Why:** Physical waste is highly visible but poorly understood.
- **Data path:** Vision ID → Static Material Impact less → Static Material Impact Reference → Disposal guidance.

Mode 1: Food Identification

Mode 2: Environmental Materials

Polystyrene / Styrofoam

Impact: 3.4 kg CO₂e to produce.

Recyclable: No.

Breakdown: 500+ years.

Banned in several US cities.

PLA Bioplastic

Impact: 2.7 kg CO₂e.

Recyclable: Compostable
(Industrial ONLY).

Breakdown: 3-6 months.

Not home-compostable.

The 8-Week Execution Plan

Sprint 1		Sprint 2		Sprint 3		Sprint 4	
Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8
Sprint 1: Architecture API research locked, Agribalyse/USDA schema designed, lookup chain defined.		Sprint 2: Engine Room PostgreSQL deployed, 150+ foods seeded, waterfall wired, confidence active.		Sprint 3: Integration Mobile wired to backend, trust UI polished, methodology explainers live.		Sprint 4: Community Sparks gamification active, TestFlight & Play Store beta deployed, Phase 1 shipped.	

From Mobile MVP to Global Infrastructure

The end state isn't an app. It is a trust layer for everything people see—in hand, on the web, in conversation, inside an agent, inside a movement. We were **here before the fire started**.

Be present. Have knowledge. Pay attention.
