GREEN LIFE - HAVE KNOWLEDGE. PAY ATTENTION.

Green Life Figma-Ready Screen Specification

Create a Figma file named `Green Life Mobile`.

1. Pages

Use these pages in order:

1. `00 Cover`
2. `01 Foundations`
3. `02 Wireframes`
4. `03 UI Kit`
5. `04 Screens`
6. `05 Prototype`
7. `06 Notes`

2. Frame Standards

Use mobile app frames:

- `iPhone 15 Pro` width for primary design
- Add one Android validation frame set later

Use naming format:

- `Screen / Home`
- `Screen / Search / Results`
- `Screen / Item Detail / Exact Match`
- `Component / Button / Primary`
- `Component / Badge / Confidence / High`

Keep an 8pt spacing system.

Suggested base tokens:

- Spacing: `4, 8, 12, 16, 24, 32, 40`
- Radius: `8, 12, 16, 24`
- Icon sizes: `16, 20, 24, 32`
- Stroke: `1`

3. Foundations Page

Create these sections.

Color Tokens

Use a clean green-forward palette:

- `Green/900` deep forest
- `Green/700` primary action
- `Green/500` active accent
- `Green/100` soft surface tint
- `Sand/50` warm background
- `Slate/900` primary text
- `Slate/600` secondary text
- `Slate/300` borders
- `White`
- `Alert/Amber`
- `Alert/Red`
- `Info/Blue`

Typography

Define text styles:

- `Display / Large`
- `Heading / H1`
- `Heading / H2`
- `Title / Large`
- `Body / Regular`
- `Body / Small`
- `Label / Medium`
- `Caption / Small`

Use one modern sans family consistently. Good direction:

- `Manrope`, `Sora`, or `Plus Jakarta Sans`

Effects

- Card shadow: subtle only
- No heavy blur initially
- Prefer contrast through surface layers, not dramatic shadows

4. Wireframes Page

Build low-fidelity grayscale frames first.

Required wireframes:

- `Wireframe / Onboarding`
- `Wireframe / Permissions`
- `Wireframe / Auth`
- `Wireframe / Home`
- `Wireframe / Barcode Scanner`
- `Wireframe / Search`
- `Wireframe / Photo Capture`
- `Wireframe / Candidate Results`
- `Wireframe / Item Detail`
- `Wireframe / Metric Detail`
- `Wireframe / Source Detail`
- `Wireframe / No Match`
- `Wireframe / Saved`
- `Wireframe / Profile`

For each wireframe annotate:

- primary action
- secondary action
- data shown
- empty/error state if relevant

5. UI Kit Page

Build reusable components before high-fidelity screens.

Navigation

- `Component / Top Bar / Default`
- `Component / Tab Bar / 4 Item`
- `Component / Search Bar / Default`
- `Component / Search Bar / Active`

Buttons

- `Component / Button / Primary`
- `Component / Button / Secondary`
- `Component / Button / Tertiary`
- `Component / Icon Button`

States:

- default
- pressed
- disabled

Cards

- `Component / Card / Action`
- `Component / Card / Result`
- `Component / Card / Saved Item`
- `Component / Card / Source`
- `Component / Card / Empty State`

Badges

- `Component / Badge / Match / Exact`
- `Component / Badge / Match / Probable`
- `Component / Badge / Match / Category Estimate`
- `Component / Badge / Match / Material Estimate`
- `Component / Badge / Confidence / High`
- `Component / Badge / Confidence / Medium`
- `Component / Badge / Confidence / Low`

Metric Components

- `Component / Metric Row / Default`
- `Component / Metric Row / Estimated`

- `Component / Metric Row / Missing`
- `Component / Material Breakdown Row`
- `Component / Disposal Guidance Row`
- `Component / Hazard Flag Row`

Utility Components

- `Component / Section Header`
- `Component / List Row`
- `Component / Toast / Success`
- `Component / Toast / Error`
- `Component / Empty State`
- `Component / Error State`
- `Component / Permission Prompt`

Use variants, not separate detached frames, wherever possible.

6. Screens Page

Build these high-fidelity screens.

Screen / Home

Sections:

- top greeting/app title
- search bar
- two main actions:
- `Scan Barcode`
- `Take Photo`
- recent items
- confidence explainer strip
- bottom tabs

Screen / Search / Empty

Sections:

- search input
- recent/suggested terms
- filter chips

- bottom tabs

Screen / Search / Results

Sections:

- search input active
- filter chips
- result cards with match badge
- loading and no-results variants

Screen / Barcode Scanner

Sections:

- top bar
- camera frame overlay
- flash
- manual entry
- helper text

Screen / Photo Capture

Sections:

- preview area
- capture/upload actions
- guidance text
- continue/retake state

Screen / Candidate Results

Sections:

- explanation header
- ranked candidate cards
- confidence labels
- search fallback CTA

Screen / Item Detail / Exact Match

Sections:

- hero item block

- exact match badge
- confidence indicator
- key metrics section
- materials section
- disposal guidance section
- sources section
- save CTA

Screen / Item Detail / Estimated

Same layout, but visually distinct:

- estimated badge
- lighter caution/info strip
- metric rows marked `Estimated`

Screen / Metric Detail

Sections:

- metric name/value
- methodology
- scope
- confidence
- linked source

Screen / Source Detail

Sections:

- source name
- type
- version/date
- ingestion info
- methodology notes
- external link button

Screen / No Match

Sections:

- message
- retry actions
- category estimate fallback

- manual search CTA

Screen / Saved

Sections:

- saved list
- optional sort/filter
- empty state variant

Screen / Profile

Sections:

- account block
- permissions
- about confidence labels
- privacy/terms
- sign out

7. Prototype Flows

In `05 Prototype`, connect these flows:

Flow 1: Exact Match

`Home -> Barcode Scanner -> Item Detail / Exact -> Source Detail`

Flow 2: Search

`Home -> Search / Results -> Item Detail / Estimated -> Metric Detail`

Flow 3: No Match Recovery

`Home -> Photo Capture -> No Match -> Search / Empty`

Flow 4: Save

`Item Detail -> Saved`

8. Annotation Rules

On `06 Notes`, add short annotations for:

- what data is exact vs estimated
- where source provenance appears
- which screens require auth
- guest save behavior
- empty/loading/error states

Keep each annotation to one short sentence.

9. Handoff Naming For React Native

Match Figma names to React files:

- `Screen / Home` -> `HomeScreen.tsx`
- `Screen / Search / Results` -> `SearchScreen.tsx`
- `Screen / Barcode Scanner` -> `BarcodeScannerScreen.tsx`
- `Screen / Photo Capture` -> `PhotoCaptureScreen.tsx`
- `Screen / Candidate Results` -> `CandidateResultsScreen.tsx`
- `Screen / Item Detail / Exact Match` -> `ItemDetailScreen.tsx`
- `Screen / Metric Detail` -> `MetricDetailScreen.tsx`
- `Screen / Source Detail` -> `SourceDetailScreen.tsx`
- `Screen / No Match` -> `NoMatchScreen.tsx`
- `Screen / Saved` -> `SavedScreen.tsx`
- `Screen / Profile` -> `ProfileScreen.tsx`

Components:

- `Component / Button / Primary` -> `PrimaryButton.tsx`
- `Component / Card / Result` -> `ResultCard.tsx`
- `Component / Badge / Match / Exact` -> `MatchBadge.tsx`
- `Component / Metric Row / Default` -> `MetricRow.tsx`

10. Recommended Visual Direction

Keep it intentional, not generic:

- warm off-white background, not pure white
- deep green primary, not neon green
- rounded cards with clean spacing

- editorial typography with strong section headings
- environmental trust aesthetic, not eco gimmick

11. Follow-On Artifacts

The next useful artifact after this spec was the React Native scaffold spec with folder structure, navigation map, theme tokens, shared component list, and starter screen contracts.
